

# Professional Lighting Package

**Energy Efficient Daylight Bulbs!**

## Perfect for Adobe Visual Communicator Users!

Our **Professional Lighting Package** features three (3) easy to assemble softbox lighting fixtures, stands, bulbs, and carry case. A simple and effortless push of the center ring and the 20" x 20" softbox is ready to use! These softbox lights are ideally suited for school classrooms, offices, home studios, product photography/videos, independent filmmakers, interviews, YouTube, Web/Pod Casting, etc.

The 4 included High-Output Energy Efficient Bulbs have an expected life of 10,000 hours or about 5 years if you never turn them off. However, most users will experience a lifetime of use from the original set of bulbs that come with this kit. The bulbs are classified as "daylight" 5000 kelvin, which simulates natural sunlight outdoors. This means you can set your camera to use its outdoor sunlight preset for white balance, making keying even easier.

Best of all these lights are extremely portable. The entire 3 Head System including stands, softboxes, bulbs, cords and accessories all fit neatly into a single carrying case suitable for airline travel.

Consider the related **School TV Made Easy 10'x10' Green Screen Kit** and save \$100 when buying both kits together. A perfect way to ensure the best possible v-screen keying with Adobe Visual Communicator!

# 10' x 10' Professional Green Screen Kit

## Perfect for Adobe Visual Communicator Users!

Our **10x10 Professional Green Screen Kit** is perfect for school, corporate and personal users of Adobe Visual Communicator software. The 10'x10' size is ideal for framing multiple newscasters from the waste up while seated or standing.

If you've ever used a backdrop before, you know that the versatility, adjustability, and strength of the support system hardware makes all the difference in setting up your studio to get the shot just right. Our green screen kit features a telescoping crossbar and 8 heavy duty screen clamps which allow you to effortlessly adjust the distance between the stands to exactly the desired width of the green screen. This instantly smoothes out any wrinkles, reducing shadows that make keying difficult.

The entire support system is extremely lightweight and breaks down into a small bag only 42" x 5" weighing approximately 5 pounds, making it versatile to use in a permanent studio setup or as a portable traveling studio. It's perfect for smaller studio areas where a pop-up screen is simply too small.

Consider the related **School TV Made Easy Professional Lighting Package** and save \$100 when buying both kits together. A perfect way to ensure the best possible v-screen keying with Adobe Visual Communicator!
